Features of concrete batching plant:

Bucket Capacity: The plant allows for adjustments in the capacity of the individual buckets used for ingredient measurement. Depending on the project's needs, the bucket capacity can be modified to ensure the precise and efficient dosing of cement, aggregate, water, and additives.

Ingredient Quantities: The HZS75 plant can be customized to control the quantities of each ingredient in the concrete mix. The proportions of cement, aggregate, water, and additives can be adjusted according to the project's specifications and desired concrete properties.

Aggregate Storage: The plant can be configured with varying aggregate storage capacities to accommodate different construction projects. The storage bins or silos for aggregates can be designed with different sizes and configurations, allowing for the storage of a suitable quantity of various types of aggregates.

Layout Design: The overall layout of the HZS75 plant can be customized to fit the available space and specific site conditions. The plant can be designed in a compact layout to optimize space utilization or in a more spread-out configuration to accommodate specific site requirements.
