- Application: High-grade Asphalt Road Paving, Construction Areas, Road Construction Asphalt Plant
- Control System: PLC+colorized Touching Screen
- Highlight: **plant asphalt, portable asphalt plant, asphalt premix plant**

Product Description

Batching Asphalt Mixing Plant Manufacturer LB1000 Asphalt Premix Plant Price

The asphalt mixing plant consists of several components that work together to ensure the efficient and precise production of high-quality asphalt mixtures. These components typically include:

Vibrating Screen: The vibrating screen separates the hot aggregates into different sizes, ensuring uniformity and proper distribution of the aggregates in the asphalt mixture.

Hot Bin: The hot bin is a storage unit that holds the different sizes of hot aggregates before they are weighed and mixed with filler and bitumen. The hot bin allows for controlled and precise batching of the materials.

Weighing System: The weighing system accurately measures the quantities of aggregates, filler, and bitumen required for each batch of asphalt mixture. It ensures the correct proportions of materials, which directly impact the quality of the final product.
