Product Description

Road construction machinery 160T Stationary Asphalt Mixing Plant and spare parts

The asphalt plant adopts modular design, easy installation and maintenance, fast removal and transportation. It is mainly used for the construction of highways, highways, municipal roads, airports and ports.

Mixing System: The plant typically incorporates a twin-shaft paddle mixer or a drum mixer. The mixing system ensures thorough blending of aggregates, filler, and bitumen, resulting in a high-quality asphalt mixture with excellent consistency and uniformity.

Precise Measurement and Control: The 80tph asphalt mixer plant is equipped with accurate weighing systems that ensure precise dosing of aggregates, filler, and bitumen. The control system allows for adjustments in mixing ratios and temperature settings, enabling the production of various asphalt mix designs while maintaining consistent quality.

Energy Efficiency and Environmental Considerations: The plant is designed to be energy-efficient, minimizing energy consumption and reducing environmental impact. It may include advanced dust collection systems to capture and filter out dust and particulate matter, ensuring compliance with environmental regulations and promoting a clean working environment.

User-Friendly Design: The 80tph asphalt mixer plant features user-friendly controls and a well-organized layout, making it easy for operators to monitor and control the asphalt production process. The intuitive interface and clear display enhance operational efficiency and reduce the learning curve for plant operators.
