Product Description

HZS35 is a popular type of concrete mixing plant designed for medium-scale construction projects. Known for its reliability and efficiency, it is widely used in various industries, including residential, commercial, and infrastructure development.

Key Components and Functions:

Batching System: This system accurately measures and dispenses the required quantities of cement, sand, aggregates, and water into the mixing drum.

Mixing Drum: The heart of the plant, the mixing drum rotates to ensure thorough and consistent mixing of the ingredients.

Storage Bins: These bins hold the bulk materials (cement, sand, and aggregates) for easy access and feeding into the batching system.

Water Supply System: A reliable water supply system delivers the necessary amount of water to the mixing drum.

Control Panel: The control panel is the central hub for operating and monitoring the plant's functions. It allows operators to control the batching process, adjust mixing parameters, and track the plant's performance.
