Product Description

The HZS50 bucket type batching plant is an advanced, stationary concrete mixing facility designed for reliable and efficient concrete production. With a capacity of about 50 cubic meters per hour, it is well-suited for medium-sized construction projects.

Key Features

Aggregate Storage: The plant includes several storage bins for different aggregate materials, such as sand and gravel, ensuring a continuous supply for mixing.

Bucket Elevator: Aggregates are lifted from the storage bins to the weighing hoppers using a bucket elevator system, which offers efficient and clean handling with minimal spillage.

Weighing and Mixing: It features an accurate electronic weighing system for all materials—aggregates, cement, water, and additives. This ensures precise mix ratios and high-quality concrete. The mixing is done in a robust twin-shaft horizontal mixer or similar, providing thorough and uniform blending.

Control System: The plant is equipped with a modern computerized control system that allows for real-time monitoring, recipe management, and operational adjustments to maintain consistent concrete quality.

Discharge System: The concrete is efficiently discharged through a bucket-type system, enabling smooth transfer to transport vehicles or directly to the construction site.
